

```
class NewPatientServlet extends HttpServlet {
    public void service(HttpServletRequest req,
                        HttpServletResponse resp) {
        String patientName = req.getParameter("patientName");
        int age = Integer.parseInt(req.getParameter("age"));
        String mobileNo = req.getParameter("mobileNo");
        ..

        // store these values into database table
        req.setAttribute("patientNo", patientNo);
        req.getRequestDispatcher("/new-patient-details.jsp")
            .forward(req, resp);
    }
}
```

```
class PatientManagementService {
    public String newPatient(Rocket rocket) {
        // store the data into database
        return "/new-patient-details.jsp";
    }
}
```
